

Foodmax Grease CAS S HS

Food grade high performance grease with high resistance to high temperatures and speeds based on a PAO

Description

Foodmax Grease CAS S HS greases are member of a family of technologically advanced greases which have been developed by complexing modified overbased calcium sulphonates. This technology is characterized by exceptional mechanical stability, high dropping point, high load carrying performance, reduced wear and excellent resistance to water and steam and corrosion. This technology equals and in many ways outperforms other premium, high temperature greases such as lithium complex, aluminium complex and polyurea.

Applications

Foodmax Grease CAS S 2 HS is a low viscosity synthetic H-1 grease for incidental food contact. It is designed to provide superior performance at elevated temperatures and during periods of infrequent lubrication in food processing applications. It is best suited for low to medium to high speed bearings, seal-for-life bearings and in most extended life operations such as centrifuges and electrical motor bearings.

Benefits

- Superior mechanical stability versus other thickeners,

particularly in the presence of heat and water

- High dropping point, typically in excess of 300 °C
- Excellent EP and AW properties inherent in the thickener
- Does not require the use of additional additives
- Excellent mobility and torque at temperatures down to -40 °C
- Contains no colorant
- Formulated for enhanced resistance to hot, cold and salt water
- Sulphonates are known and used for their excellent rust prevention properties
- The use of premium antioxidant and a high viscosity PAO ensures excellent thermal and oxidation stability. Life performance is typically increased by up to four times that of a regular mineral oil based grease
- Bearing life performance in excess of 200 hours
- dN factor 400.000

Specification

DIN 51502 – KPLHC2K-40
